KALU ONUKA DANIEL

PROFESSIONAL SUMMARY

I am a developer who genuinely enjoys the "puzzle" of software engineering connecting clean, user-friendly interfaces with secure, high performance backends. Over the last 4+ years, my journey has taken me from building foundational banking systems in Nigeria to collaborating on international projects in Europe. I don't just write code; I focus on building tools that actually solve problems for users. When I'm not shipping features, I'm usually teaching beginners how to code, which keeps my own fundamentals sharp and my communication clear.

PERSONAL INTERESTS

- Music Lover
- Creative Experimentation
- Ideas Creation
- Reading

TECHNICAL SKILLS

- Python (Fast Api)
- JavaScript/Typescript
- React/Nextjs
- Tailwind CSS
- Database Management with PostgreSQL, Cloud deployment via AWS
- Git/GitHub
- RESTful API Design
- Newbies Training & Coaching

COMMUNITY & PROJECTS

PROFESSIONAL EXPERIENCE

Full-Stack Developer (Contract)

Lia, Greece

Oct 2025 – Feb 2026

- Stepped into an international team to help bridge the gap between their complex backend data and the frontend user experience.
- Focused heavily on mentoring junior developers, helping them navigate technical roadblocks and maintain a high standard of code quality.
- Worked across time zones to deliver a scalable product that meets strict European performance standards.

Full-Stack Developer (Remote)

Tonatel Beauty & Spa | Port Harcourt, Nigeria

Dec 2024 – July 2025

- Took ownership of the frontend experience, moving the UI from "functional" to "delightful" using React and Tailwind CSS.
- Worked closely with users to understand where the app was slow or confusing, then implemented performance fixes that made the system feel snappy and responsive.

Backend Developer (Contract)

OHF Microfinance Bank

Sept 2023 – Oct 2024

Founder & Tutor | "Synapse Tech Hub" Online Class

- I started a small online community where I tutor beginners in the basics of Full-Stack development.
- I translate "tech-speak" into plain English to help students understand complex concepts like API integration and database relationships.
- Seeing my students successfully deploy their first apps is what drives my passion for continuous learning.

- Developed the "engine room" of the bank's digital services, focusing on the security and reliability of financial transactions.
- Built and maintained APIs that handled sensitive customer data, ensuring every transaction was processed accurately and stored securely in PostgreSQL.
- Collaborated with the compliance team to ensure our backend logic followed strict financial regulations and industry standards.

Junior Backend Developer (Hybrid)

Jan 2023 – August 2023

- I started my professional career here, eventually rising to lead a small team of 3 developers.
- Focused on building the Fast API foundations that allowed our internal projects to scale.
- Learned the value of "early delivery" by refining our workflow to ship features 20% faster than previous cycles.

EDUCATION

OND/HND in Computer Science

Abia State Polytechnic
2020 – 2025

Software Engineering (Full-Stack Developer)

JengaTech Institution
2021 – 2023

Industry Standard Software Engineering

JengaTech Institution
Jan 2026 – Mar 2026
